

Smarter Data, Safer Schools

How Securly Pass Uses Data to Improve School Safety

Securly Pass provides schools with real-time data for complete visibility into student movement. By leveraging digital hall pass insights, administrators can track missed instructional time, identify behavior patterns, and optimize school operations. This data-driven approach helps schools implement informed support and intervention strategies—keeping students where they belong: in class!

Why It Matters for California Schools

- **Data-Driven Insights:** Pass collects data on when students leave and return, providing detailed records on patterns of behavior such as frequent or lengthy absences from class.
- **Identification of Instructional Time Lost:** By tracking how long students are out of class, schools can assess the amount of instructional time lost, identifying students who may be missing crucial learning.
- **Targeted Support & Intervention:** With data on students' hall pass usage, schools can identify patterns and intervene with students who may need additional academic support, emotional or behavioral assistance, or counseling.
- **Improved Communication:** Pass helps streamline communication between teachers, students, and administrative staff regarding students' whereabouts.
- **Efficient Resource Allocation:** By identifying students who frequently miss class or need additional attention, schools can allocate resources and staff more effectively, ensuring at-risk students receive the support they need.
- **Increased School Safety:** With real-time monitoring, administrators can quickly address any safety concerns by knowing the exact location of students who are out of class.

Securly Pass is an Approved Vendor for LAUSD UDIPP ID: 167343. As an approved vendor, Securly Pass meets stringent data security and privacy standards required by California school districts, ensuring compliance with state and district policies.
