securly ai transparency

Get visibility into the AI tools students already use

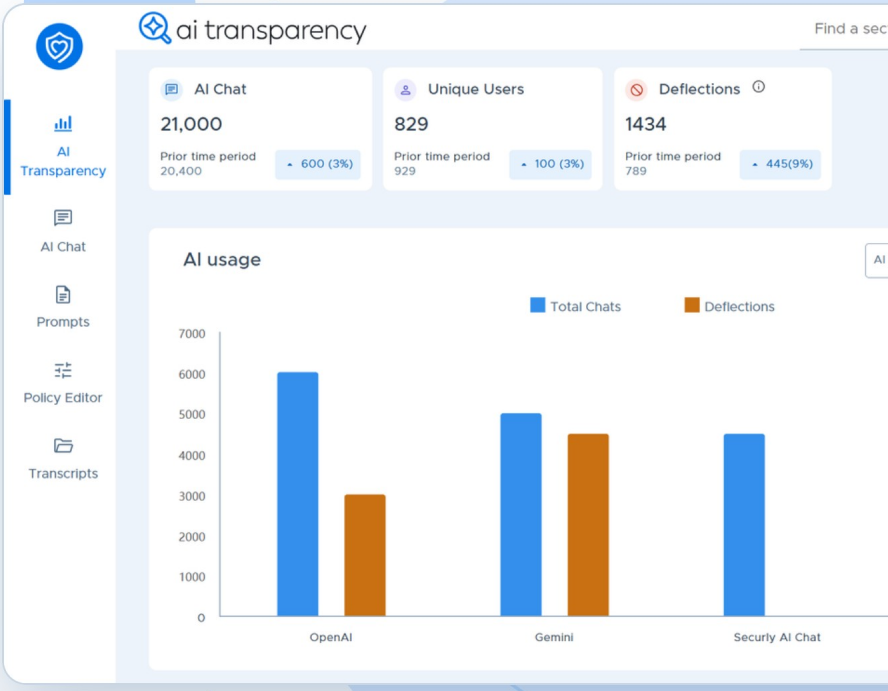

With Securly AI Transparency, you can...

- **See student AI conversations** in ChatGPT, Gemini, MagicSchool, and more
- **Set guardrails** instead of just blocking AI tools outright
- **Track AI use by school, grade, and classroom** from one dashboard
- **Get safety alerts** on concerning AI conversations through Securly Aware
- **Give parents a view** of their child's AI use with Parent AI View

22% of student AI conversations had content deflected by a district-defined guardrail

2% of student AI conversations were flagged for safety concerns

"It's one thing to say, yes, we can see it on our logs, but ***it's another thing entirely to be able to say, let's go look at the conversation. Let's look at what that looks like over time, because that matters."***

Erick Buenrostro, Digital Resource & Content Specialist
Ysleta ISD, Texas

Filter AI the same way you filter the web

Securly AI Transparency captures conversations in third party AI tools, checks every prompt against the policies you set, and keeps a full record that can be made available to district leaders, teachers, and parents. Securly AI Transparency also offers Securly AI Chat, a fully managed, education safe AI platform.

How Securly AI Transparency works

1 A student sends a prompt

Third-party AI tools

- ChatGPT
- Gemini
- NotebookLM
- Microsoft Copilot
- MagicSchool
- SchoolAI
- Brisk Teaching
- ColleagueAI

Securly AI Chat

2 Policy is applied

Checks the prompt against your district's AI policy

3 The prompt is resolved

Allowed
Students use AI tools as normal, while their prompts and the AI's replies are logged

Deflected
If a prompt goes against your policy settings, the student gets a deflection message in place of an answer. In Securly AI Chat, the AI redirects the conversation to a safe topic.

Scanned for safety
Your team is notified when prompts contain signs of self-harm, bullying, or violence

Recorded
Every prompt, reply, and deflection is saved to the student's conversation record

Who get visibility into student AI use?

District leaders
via AI Transparency

Administrators can view and report on usage by school, grade, and platform, the subjects students use AI for, deflection counts, and view full transcripts.

Teachers
via Securly Classroom

Teachers see their students' prompts and usage summaries during class, so they can guide AI use in real time during their class sessions.

Parents
via Securly Home

Parents get visibility into their child's AI conversations and deflected prompts when your district turns on Parent AI View in Securly Home.

Securly is committed to student data privacy and security

Certified and audited

iKeepSafe certifies Securly for FERPA, COPPA, CSPA, and relevant state data privacy laws. An independent audit backs Securly's SOC 2 Type 2 certification.

Never used to train AI

Student AI conversations are encrypted with AES-256 at rest and TLS in transit. Securly does not sell, rent, or trade student data, and never uses student AI usage data to train AI models.

Guardrails and visibility for every AI conversation

Topic-level guardrails: Choose which topics each policy allows or deflects, including sexual content, drugs, gambling, hate, firearms, and games.

Per-policy controls: Turn AI capture and Securly AI Chat on or off for each policy, so every group of students gets the access you intend.

Deflection reporting: See how often prompts are deflected and in which categories, so you can tell when a policy needs adjusting.

Prompt and reply capture: The Securly browser extension records the text of each prompt and reply in supported tools, beyond the site visit alone.

Deflection messages: When a student's prompt is deflected, the student sees a message explaining your district's policy in place of an answer.

AI Transparency dashboard: See AI use across the district by school, grade, and platform, along with the academic subjects students use AI for.

Full transcripts: Open any conversation to read the student's prompts and the AI's replies in the order they happened. along with a summary of the conversation.

Automatic tool updates: Securly maintains the list of supported AI tools centrally, and the extension picks up changes with no admin work.

Securly AI Chat: education-safe AI that you fully control

Fully managed AI: Give students an AI chat tool that runs on OpenAI or Google's models, fully aligned to your district's policies.

Lesson Prompts: Admins and teachers build a library of reusable prompts, each tied to a course and curriculum standard, that students use to start AI Chat sessions.

Grade-aware answers: Securly AI Chat can be linked to your SIS to use each student's grade level to tailor its responses to the right level.

Custom Policies: Write your own instructions for how AI Chat responds, district-wide or for a single policy, and AI Chat follows them alongside your topic settings.

Lesson Prompt sharing: Make Lesson Promps available to everyone, a single course, or no one, and send it to students with a sharing link.

Redirect from blocked AI sites: Securly Filter can send students who reach a blocked AI chat site to Securly AI Chat instead.

Get more from Securly AI Transparency

Securly AI Transparency comes included with Securly Filter. If your district already uses Securly Filter, you can turn it on right now. Plus, it integrates directly with the Securly products below.

Securly Aware

Student AI prompts are scanned for signs of self-harm, bullying, and violence, and alerts are sent to your designated safety team.

Securly Classroom

Teachers see student AI prompts and usage summaries during class, so they can guide AI use in the moment.

Securly Home

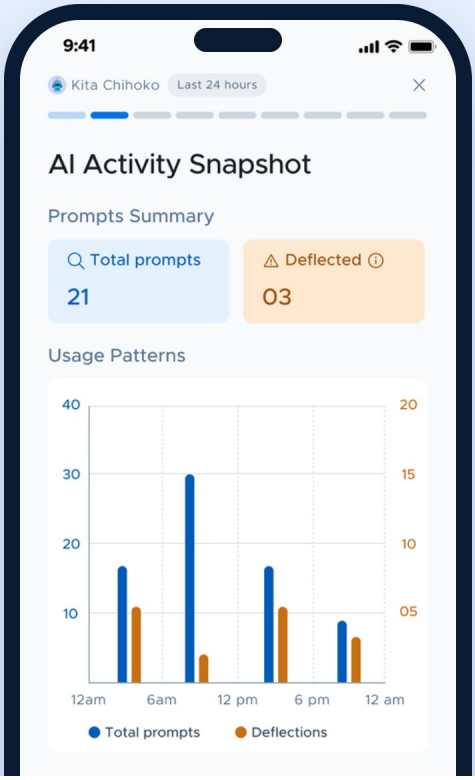

Promote family engagement and set how much control parents have over devices when they go home.

Bring parents into the conversation about AI

securlyhome

Parent AI View puts AI visibility in the app families already use

- Parents see their child's AI conversations on school-issued devices, including prompts that were deflected.
- Your district decides whether Parent AI View is on, so your AI policy carries into the home.
- Send parents optional alerts for activity related to self-harm or bullying, powered by Securly Aware.
- Reach all your families with English, Spanish, and French support.
- Families get what they need to talk about responsible AI use with their children at home.

Works with the rest of Securly safetyOS™

securly classroom

Easy-to-use classroom management software that lets teachers see student screens during class, push resources, and teach without digital distractions.

With AI Transparency: Teachers see student AI prompts and usage summaries during class, so they can guide AI use in the moment.

securly aware

Scan student online activity for signs of self-harm, bullying, and violence, and give school staff the tools they need to follow up on alerts and help proactively.

With AI Transparency: Concerning conversations students have with AI reach your safety team alongside additional context from their web activity.

See how your students use AI before you write your policy

We'll walk you through the AI Transparency dashboard, set up a sample guardrail policy, and answer questions about your district's devices and AI tools.
